Information:

Felt panels are not only a beautiful and tasteful interior decoration, they also have the function of muffling unwanted sounds, eliminating echo effects and improving interior acoustics. This is made possible by the use of top-quality materials and felt. The acoustic panels are a decoration with a modern design that cannot be ignored! Thanks to the use of felt, the wall lamellas absorb sounds, for example from neighbours, from the home cinema, etc. This also means that they do not carry sound. This also means that reverberation is not carried away and the perception of all sounds is more pleasant and more pleasing to the ear.
